

DETER. DETECT. DELAY. DENY.

Transcend Security's solar-powered **Mobile Surveillance Units** are a low-cost alternative to physical security guards and a more secure option than periodic security vehicle patrols.

Operating 24/7 and monitored by the Transcend Security Operations Center, our mobile surveillance units are equipped with best-in-class software, cameras, and video management system, providing peace of mind that's accessible anywhere.

KEY FEATURES

Each unit is equipped with the base features described below.

- A programmable, one (1)-click, (2)-way horn speaker¹ provides customized intrusion deterrence.
- A 360°, Multisensor camera² with four (4) 5MP image sensors and 2.5x optical zoom.
- Two (2) 40K lumen "Set-and-Forget" LED lights³.
- Extendable 25-foot mast⁴ with 360° viewing potential.
- A built-in, 1440 total wattage four (4)-panel solar array⁵.
- Operational controls⁶ for built-in battery monitor, light switch controls, and solar array adjuster.
- Rapid deployment with 4G connectivity, eliminating the need for Wi-Fi connection.

MONITORING FEATURES

Standard monitoring services consists of the four levels below.
Customized monitoring can be added for additional monthly fees.

Incident-based monitoring	After-hours monitoring of incident-based alerts through the TSOC. After-hours is considered 6:00 PM to 6:00 AM on weekdays and weekends 24 hours. Regular weekend business hours excluded if applicable.
After-Hours Virtual Tours	Virtual property tours conducted twice (2) every night of the week between 6:00 PM and 6:00 AM, and twice (2) per day during weekends between 6:00 AM and 6:00 PM. Analysts monitor and report any suspicious activity.
Passive monitoring	Cameras still record and capture information during regular weekday business hours (6:00 AM to 6:00 PM) when not monitoring on virtual tours. If evidentiary documentation is required, information will be provided upon request.
Defined Incident monitoring	Site is monitored for specific events ("defined incidents") during business hours. Common defined incidents include, but aren't limited to, motion detection in secured spaces and vehicle or person(s) of interest detection.

ARTIFICIAL INTELLIGENCE FEATURES

Standard features include:

- **People Analytics**– filter detected faces and view objects individuals may be carrying while in a defined area.
- **Vehicle Analytics**– browse, cross-search, and filter snapshots of vehicles detected within a defined area. Filters are available for a range of attributes, including vehicle body type and color.
- **Interest Notifications**– create triggers and set proactive alerts when a Person or Vehicle of Interest enters or exits the camera's field of view. Manual voice commands through horn speaker included.
- **Motion Notifications**– trigger an alert when people are in a defined space within a certain time window.

Optional features* include:

- **24-Hour History View (Time Lapse)**– our Analysts can quickly view an entire day's worth of footage and find meaningful events, including people and vehicles instead of spending days manually scrubbing through hours of video.
- **License Plate Recognition (LPR)**– differentiate and categorize objects and license plates from up to 98' away with best-in-class LPR technology. Full video image can be viewed in up to 4K resolution along with tagged attributes and metadata.

*Optional features may require a camera installation different from the standard offered camera.
